

## Diabetic Dilated Eye Exams

A dilated eye exam may detect eye disease before noticeable vision loss occurs.

When diabetic retinopathy is detected early, treatment is 95% effective in preventing severe vision loss. Controlling diabetes may help slow the progression of diabetic retinopathy.

Below you will find a list of optometrists and ophthalmologists who can perform a dilated eye exam once a year, or as recommended. Please inform the office of your diabetes diagnosis when scheduling the appointment and completing any registration/clinical information forms.

It is also important to make sure that the specialist sends a copy of your diabetic retinopathy exam to FMMC to be included in your medical records. Our fax number is (978) 534-8705.
